### **AutoCAD Full Version Free Download**

In 2010, AutoCAD 2012 marked the launch of an official AutoCAD mobile app, now renamed the Autodesk Mobile App, which allows AutoCAD users to access AutoCAD on the go. The mobile app runs on Android, iOS, Windows, and other mobile devices.

**How Do I Access AutoCAD?** Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. AutoCAD is also available as mobile and web apps. You can open AutoCAD from the web browser of your computer or mobile device or from the app store. Once you are in the app, you can work directly in the program, access resources on the AutoCAD Cloud, or export to AutoCAD LT or AutoCAD LT Classic to create AutoCAD files or to load into other programs. **AutoCAD desktop app** Open the app store on your computer and download the AutoCAD app, which will then open. Sign in or register. Launch the app. The app will detect your computer and the network connection and the app should download the latest version of AutoCAD. **Creating a New AutoCAD File** The app will open to the Autodesk Cloud where you can create a new CAD file or open a file you have previously created. If you have not already downloaded the latest version of AutoCAD, it will download it now. **Creating a New CAD File** In the app, click the Create New icon to start the CAD file creation process. In the Create New section, type a name for the file, select the type of CAD you want to use, and select one of the sample templates. You can also browse your computer for existing AutoCAD files to use as the basis for your new file, and copy existing files from the file browser. **Creating a New CAD File** The templates available range from line, surface, and solids to wall, doors, windows, pipes, and the multi-sheet to allow you to quickly create the various types of CAD files you use regularly. If you don't have a template to use, you can choose to create a blank AutoCAD file. **Creating a New CAD File** The options available on the Create New screen will vary depending on the template. Click on the Create New icon to start the creation process.
