This means that AutoCAD allows you to create drawings (2D) from 2-dimensional (2D) objects. In AutoCAD, 2D objects are represented by 2D wireframe shapes, commonly known as polylines and polygonal meshes. Polyline Polyline is a line segment that is commonly used to represent a path. Each segment is identified by a number of points. A single point consists of a latitude (longitude) and a height. Autodesk's drawing product has various forms of 2D shapes, including polylines, polygonal meshes, spline curves, and rectangles. An example of a polyline is shown below. Polyline Polyline is a line segment that is commonly used to represent a path. Each segment is identified by a number of points. A single point consists of a latitude (longitude) and a height.
