Contents show] Early History Edit In October 1980, a year before the AutoCAD release, a man named Thomas J. O'Neill, of Hinesburg, Vermont, USA, was looking for a new job. After several interviews, Thomas was hired to write code for the Raster Graphics Systems (RGS) division of Electronic Arts (EA) in August 1981. Thomas was put in charge of a new division at EA, called the Graphics Group. He was given the responsibility of developing an application for CAD. O'Neill called the group "Sculpt", based on the first letter of the company name, EA. He started with a new icon by Tom Mitchell, that looked like a ball-and-stick model with some crude wheels. They called it "Scratch", and started drawing the user interface for it. For the first version of Scratch, they were given an HP 1100 computer to write on. The next day, they were given a 20Mhz Motorola 6800 to run on, and that was the most powerful they had ever used. The first release of Scratch was in December 1981, and was first made available to the user base of EA's already established RGS division, which created and sold games for microcomputers. Initially, Scratch only

This is the process of first heating or "treating" a mold to a temperature well above its glass transition temperature to first, soften or melt the mold and then, forcing the softened mold into contact with a molding surface, to cause the softened material to flow into the mold and cool. The product may then be ejected from the mold. After an appropriate cooling time, the mold is opened and the product removed. Depending on the specific polymer being molded, mold temperatures from about 150° F. (60° C.) to about 400° F. a1d647c40b

The mechanisms by which 1,25-dihydroxyvitamin D3 (1,25D3) and angiotensin II (AngII) modulate calcium transport across the calvaria were investigated. Both 1,25D3 and AngII significantly decreased calcium transport across the calvaria and the dose-response curve for 1,25D3 was shifted to the right compared with the curve for AngII. 1,25D3 and AngII reduced the expression of the type I and II calcitriol receptors.
