There's No Problem (Or. Best Practices for Working Around Bad Voltage. Effect of polymerization on the acute toxicity of organic monomers to *Daphnia magna*. The acute toxicity of nine organic monomers commonly used in dental materials to *Daphnia magna* was assessed following the exposure to the monomers in their precopolymerized and postpolymerized states. The use of a standardized exposure test procedure involving direct exposure to the precopolymerized solutions and contact exposure to the postpolymerized solutions was compared to the use of exposure to the solutions in an immersion test, which was selected as the standard test procedure because it was used in the United States Environmental Protection Agency's new toxicity guidelines. Analyses of variance for acute toxicity based on LC50 values in the immersion and direct exposure tests for the monomers and their polymerization products showed that the toxicity varied among the monomers, and was highly correlated to the polymerization products. The polymerization products had an LC50 in contact exposure tests below that in the immersion tests. Non-linear regression analysis of the toxicity of the polymerization products revealed that the polymerization products were not completely soluble in distilled water, but a combination of factors caused polymerization products to dissolve at the tissue immersion level. This study indicates that polymerization contributes to the acute toxicity of monomers used in dental materials. 1. Field of the Invention The invention relates to a frequency synthesizer and, more particularly, to a frequency synthesizer including a multi-stage loop for generating a high frequency by phase detection and mixing of a reference signal and an oscillating signal of a VCO. 2. Discussion of Related Art As high-frequency analog circuits become increasingly integrated, high-frequency analog oscillating signals are generated through high-frequency micro-electromechanical system (MEMS) technology. However, voltage controlled oscillators (VCOs) 9df0af710a
