Solidworks 2007 SP0.0 April.Q: C++ Decimal Point Issue I am working on a project in which I need to create a loop that will apply a certain probability to an integer. For example, I will take a number, and give it a value between 0 to 100. I will then apply a probability to the value, and then output the value. If the probability is a fraction, then it will take the floor function. For example, if the probability is 50%, then I will output the value with floor (value/100 * 100). If the probability is 25%, then I will output the value with floor (value/200 * 100). The problem is, it is not subtracting as expected. For example, if I input 1, I get 49 as output instead of 50. This problem occurs even when I input 0 and return 1. I have a function called Probability that takes in two arguments: the int and a floating point percentage. It returns a random value between 0 to 100. For example, if the probability was 50%, then it would return a random value between 0 and 50. Then I have a function called ApplyRandomProbability that takes in a floating point percentage, multiplies it to a number, and then applies the probability. The percentage must be a decimal point. If the percentage is 1/5, then the random probability is applied and the integer becomes 0. If the percentage is 0.2, then the random probability is applied and the integer becomes 100. #include #include #include using namespace std; void Probability(int & randInt, float & randFloat); void ApplyRandomProbability(float & probabilities, int & num); int main() { int myInt; float myFloat; cout > myInt; cout > myFloat; Probability(myInt, myFloat); cout

Msi.dll VSTA 2008. Targeting protein-protein interactions of p53 family proteins by small organic molecules. Aberrant expression of the tumor suppressor p53 is frequently associated with poor clinical outcomes in breast cancer and other cancers. The activity of p53 is regulated in a complex manner by many intracellular factors, including p63 and p73. Recently, the development of small molecules that selectively target interactions among p53 family proteins has opened a new field in cancer therapy. This paper reviews the p53-specific therapeutic options that have been developed based on small-molecule targeting of interactions involving the p53 family proteins. Public health is in an existential state of crisis and Australian governments are not doing enough to prepare for an influenza pandemic, experts warn. Australia was badly hit by the 2009 pandemic, the most lethal outbreak of the virus in history, with more than 17,000 deaths and more than 9000 hospitalisations from severe disease. The health system was stretched to its limits. Advocates for improved pandemic planning say Australia has a critical role to play, as was demonstrated by the H1N1 swine flu pandemic of 2009, and more recently, the coronavirus outbreak in China that has infected over 44,000 people in over two dozen countries. In a joint submission to the House of Representatives' Standing Committee on Health and Medical Research, a coalition of organisations representing governments, industry and other stakeholders has called on the government to take steps to improve the health system's preparedness for a potential pandemic. The joint group noted that pandemic influenza 82138339de
