Word Counter is an ultra-simple text counting utility with a very straightforward user interface. The app lets you count words, lines and characters within any given text. Features: Word counter, a simple, stripped down user interface that lets you set different options and features from the app's very core. In addition to the word count, you can also count line breaks or characters within the text. The app also includes a useful option that lets you copy the number of words directly into the clipboard. You can also paste text directly into the app to see the final number of words in real time. The app comes without any ads and supports multiple text formats. Absolutely nothing to complain about, but nothing to write home about either With its very basic featureset and lack of options, Word Counter is most certainly not the tool that you would turn to for your demands. It doesn't support any file types other than plain text, it doesn't come with any options for word counts, and it doesn't support any formatting such as highlighting words or characters within the text. It's a functional word-count tool with a simplistic UI that gets the job done.
