In 2014, Autodesk announced Autodesk Fusion 360, a free online CAD-building-software application for both desktop and mobile devices, which is available in beta in July 2016. In 2014, Autodesk released a subscription service, Autodesk Design 360 (later renamed Autodesk Design and Autodesk Design 360), that included AutoCAD LT, AutoCAD LT SP1 and Autodesk 360. History Development AutoCAD was developed in 1982 by John Stebbins and Michael Grothaus. The first Autodesk software was a package of several different programs that included an extended non-metric graphic system for architects. In 1983, Stebbins was joined by Michael Grothaus, a student at the University of Illinois. They started to create a new system to meet the needs of a broader market, and decided to have the system be based on standard metric units. They went on to form a company called Stebbins & Grothaus, and were soon joined by Darrell Wallace (Stebbins' brother-in-law), who was already a successful programmer. Development of AutoCAD began as an internal company project at the University of Illinois, and was spun off to the new company, Autodesk, on December 1, 1982. In November 1983, Autodesk released AutoCAD for the Apple II. The release came after the Apple II was the computer of choice in the drafting industry, and with the assistance of Apple's Steve Jobs, Autodesk was able to use a

Q: Wix DirectoryRefs I have a number of installers for my app which are all based on a common trunk. At the moment i'm calling these using a WixDirectoryRef, in the trunk.wxs i have the following And then i have the files under the install directory, all based on that one main trunk.wxs file, which are stored under a number of dirs which i call using a DirectoryRef. ... Which is working fine for now. The problem i have is that in order for my app to build and install correctly, it needs access to a number of dlls which are under a directory called "lib" My question is, is there a way to do this? Or do i have to create a bundle for each of the dlls and reference them in the trunk.wxs? Any help is appreciated. Thanks. A: Don't use DirectoryRef to create your component tree. Create the component tree and then create a DirectoryRef to the location of the directory that contains the DLLs. Then reference those DLLs in your component tree using ComponentGroup.
