Autodesk acquired the original author and original business of AutoCAD software in 1999 from the original author and business, Dassault Systemes. The two companies' Autodesk and Dassault brands became separate brands. AutoCAD had acquired around 400,000 users by the time of the merger, and increased to more than 1 million by the time of the acquisition. This tutorial will walk you through the initial configuration of the app, including loading an existing file, learning to draw a rectangle, configuring a toolbar and running AutoCAD. This tutorial is designed for users of any level of AutoCAD experience. Automatically loads existing file The first thing you'll want to do is open a file that you'd like to work with. You can also load one from the app's preferences panel. To open a file, just drag it onto the app window. Right-click on the app window and choose Open from the menu, or simply press ctrl+O. Choose Open from the list of files that appears, navigate to the location of the file on your computer and open it. Note that AutoCAD will automatically detect the type of file you are trying to open, and will ask whether you want to open it or convert it to a drawing. If AutoCAD says that the file has been opened successfully, you'll see a small indicator at the bottom of the app window. Click on that to see a list of your drawings, and you can drag to switch between files. New users of the app, or users who are just learning, may not realize that this app can use existing files. The app's window contains a number of different panels, each of which contains controls for various functions, such as drawing, modeling and a file browser. You'll need to be familiar with drawing and manipulating objects before you'll be able to follow any of these tutorials, but hopefully you'll find the simple interface and many of the controls familiar. There is a very basic tutorial available if you open it from the help menu, or from the app menu. Let's look at the main panels of the AutoCAD window. Note: If you have not already done so, we recommend that you create a new file. If you have an existing file, that's fine, but it may be more convenient to work in a new file. The upper left panel is where
