KeyMACRO is made by Marko Tverclovski and published under the MIT License. EscapeURL Description: The EscapeURL add-on for Chrome allows you to type in any URL and send it through a special domain. The way this site works is that you give it the link you want to remove, and it will "escape" it to make it look

like a normal URL. You will then be able to type in that URL, and send it with a click of a button. EscapeURL is like "OpenURL" for Chrome, except it allows you to add domains and remove domains too. I've created this Chrome extension because I've used this sites too much and it was getting annoying to type in a different domain when I have to. This extension is currently only available for Chrome. AmazingTab Description: AmazingTab is an extension that can make Chrome the default browser for all your websites. It has the power to turn any website into a user-friendly website so that you can view it more easily. You can even create a startup page for your Chrome browser by selecting the home page and customizing it to your liking. AmazingTab has more features which are designed to make the browsing experience for your web sites better. For example, bookmarking websites, settings the new tab page and more. Chrome extension requires Java runtime environment to be installed. 1d6a3396d6
