What's New In Parsec?

Parsec is a remote streaming app that allows you to play videogames by streaming your computer's screen and input devices to a remote computer through the internet. Parsec automatically optimizes your streaming connection to a dedicated remote server by using multiple compression algorithms to ensure a smooth streaming experience. Beside Parsec's streaming application, Parsec brings a web-based server control panel that allows users to host Parsec's virtualized desktop on their own computers. Hosting Parsec's virtual desktop in one's own system allows users to connect from anywhere in the world, and to play videogames on their own personal computer without additional streaming software and plugins. We're talking about genuine remote gaming! Parsec in a Nutshell: Parsec allows you to play games that would otherwise be restricted to offline play in your personal computer's resources by streaming those games to your remote computer. In addition to allowing for remote playback of games, Parsec also allows you to control your streaming settings to ensure that you don't experience lag or loss of video and audio quality when streaming games. Parsec's custom host panel gives users the opportunity to take advantage of the streaming capabilities of Parsec without the need for server-side setup or plugins. Parsec Features: - Automatic optimization of streaming connection settings to dedicated servers - Control streaming connection settings from an embedded web server control panel - Control your streaming connection parameters from anywhere in the world - Play and stream your favorite games in Fullscreen Windowed Mode on PC as well as Mac and Linux - Parsec includes an embedded web-based server control panel - Parsec's image rendering libraries include features such as anti-aliasing and hardware accelerated drawing Parsec Technology Stack: Parsec leverages the already powerful and widely used OpenGL API to create a web-based virtualized remote desktop, allowing it to draw 3D graphics directly to a remote computer's screen and to process user input directly to the remote computer. Parsec uses multiple compression algorithms to optimize your streaming connection, and it supports multiple screen resolutions (up to 1920x1080) on Remote Desktop. Parsec Installation: [Instructions for (MDT) Server (1/3): - Install AWS SDK for node.js: NPM iam install aws-sdk - Configure Parsec SDK to allow internet access: AWS_ACCESS_KEY_ID and AWS_SECRET_ACCESS_KEY values are placed in ~/.aws/c
