Stick-It (also known as Stick-It Notes, Stickies, Post-Its, Post-It Notelets) is a page-wide template that creates sticky note-like pages in a document. By default, these "sticky notes" are displayed on the document page in the same manner as Post-It notes. Sticky notes are saved in a separate.DST file. To create a new sticky note, a custom template is created, and is then placed into the document where it is sticky. As with notes, sticky notes can be archived and manipulated. Stick-It Description: GPO Group Policy defines a number of Group

Policy preferences, referred to collectively as Group Policy Settings. Each Group Policy setting can be associated with either a user, a computer, or an organizational unit. The Group Policy

---

Settings Wizard allows the user to create Group Policy preferences for Windows computers. GPO Settings Wizard Overview: Many options must be entered to define Group Policy settings. These options include Group Policy category, Groups, Group Policy settings, Computer Settings, and Domain Members. The Group Policy Settings Wizard provides an easy and efficient way to perform common Group Policy tasks. GPO Settings Wizard Details:

Choose an application-specific Group Policy preference option:

Select a Group Policy Category option: A new window will open, which provides a list of Group Policy settings available for this category. Choose a Group Policy setting option: Click Next. A screen will be displayed that lists all computer settings in the selected Group Policy category. Choose a Computer Setting option: Select a computer setting from the list and click Next. Computer settings options are grouped into seven categories. You can choose specific categories of settings to add to a computer policy template.

Choose a Domain member option: Users, Computer accounts, or domains can be selected for addition to the computer policy. Click Add. An Add Domain Member window will open. Specify a Domain to add: Click Add. A dialog box will open that lists the Domain Groups in the selected domain. Click OK. The list of Domain Groups will be displayed in the Selected Domain window. The corresponding computer setting will be displayed in the Details pane of the Group Policy Settings window. Click Next. Group Policy settings for a selected computer setting can be added to a

Your Power Packages. In many cases, a Power Packages are a collection of extensions that are pre-packaged in an easy to install bundle. The PowerShell Gallery offers a wide variety of PowerShell based bundles. Those include bundles that offer reports about the health and performance of servers, a scripts to automate your backups, or an editor that makes creating and manipulating Office documents a breeze. So if you have enough knowledge of PowerShell and are already an expert, why not power up your own custom bundle? Say you want to create a very specific set of scripts and share them with your colleagues. Or maybe you are a non-technical user and you want a simple way to manage your settings and system preferences. Power Packages are a great way to provide a collection of extensions that fit the needs of your users. In this tutorial, we take a look at a very simple Power Package. We show you how to install one, create a new bundle, and then how to deploy the bundle to the PowerShell Gallery. This tutorial is designed to help you understand how a Power Package works and how to install one from the PowerShell Gallery. The Package will be found by users and feature in the PowerShell Gallery, so it must be in a format that makes that possible. Making the Package The first thing we need to do is create our own package. As we'll see in this tutorial, a package has a manifest file and an optional install script. For this package we're going to be using PowerShell code. Let's start by creating our package manifest: In that example, we're creating a package that we are going to call 'PowerBowser'. We give

---

it a name and a version. The version is optional. A version is important, however, as it can indicate how old or out of date the package is. In the ‘Summary’ section of the manifest we provide a bit of information about the package. It’s

---

## System Requirements:

-It's a light RPG with a single character, set in a post-apocalyptic world where the war between the human and the cyborgs has ceased for now. -You play as an "on-board" designer of the most advanced train-robots, working with a team of technicians and mechanical specialists. -Played like the old 8-bit games, but with action-RPG mechanics. Storyline: You and your friends work for Rail Design, an international company designing robot's for trains and managing them.
