Autopsy is a practice of great value for the understanding of disease and death. It is particularly useful for documenting or recognizing syndromes, evaluating the cause and effect relationships of diseases in patients, and probing the pathophysiology of those diseases. Autopsy has been a treasured mode of medical investigation as its ancient origins can be traced to Hippocrates. The field of forensic medicine has grown to include autopsy-based medical sciences. Infectious disease is the discipline that has been most devoted to autopsy. In the past 100 years, autopsy has

been a dynamic and powerful force in diagnosing and elucidating disease. It has greatly altered our understanding of infectious disease. This paper describes how autopsy has driven the study of infectious disease forward in the past 100 years. This is illustrated by reviewing some of the most significant discoveries made by pathology, microbiology, immunology, virology, and epidemiology due to the use of autopsy in their study of diseases.

Court/Getty Images Alcohol may be a nutritious, healthy food for women, but that doesn't mean they need to drink at least two

drinks a day, as previously advised. New guidelines from the American College of Cardiology's women's division suggest that most women don't really benefit from drinking alcohol, and alcohol should be consumed on an occasional basis. When it comes to alcohol, there's a big difference between "binge drinking" and "light drinking," according to the new guidelines. Binge drinking is defined as four or more drinks for women and five or more drinks for men in one sitting. Light drinking is two or three drinks for women and three or four drinks for men in one sitting, once a week. Every woman needs to determine how much alcohol is right for her. A third of American women binge drink at least once a week, the report says. Even more women drink in a "light drinking" way. "Every woman needs to determine how much alcohol is right for her based on her weight and body mass index," Lynn Cornwell, a cardiologist at Harvard Medical

School and the lead author on the guidelines, told Business Insider. The report says that women who tend to binge drink are almost certainly drinking too much. They also have a higher risk of cardiovascular disease, depression, diabetes, obesity, and alcohol poisoning. “We make a
