Learn geometry - the full story by learning with Cabri II Plus, a revolutionary geometry software solution. From straight lines and angles to both fundamental and advanced equations, Cabri II Plus makes learning geometry easy, enjoyable and convenient. Enjoy a wide range of features: -Draw your geometrical figures -Easily solve many types of equations -Print your geometrical figures -Create and analyze functions -Measure

the area, perimeter, and other properties of figures -Generate infinite types of polygons -Label and attach labels to your figures -Grab your figures onto your TI-Nspire, TC-Nspire or other TI graphing calculator, or use the export feature to save them into Word and PowerPoint documents Cabri II Plus Learning Curve: The learning curve is smooth and students can easily learn the basics of geometry by exploring the program interface. You can grasp fundamental concepts

through hands-on usage. Key Features: -Draw and edit a wide range of geometrical figures -Easily solve various types of equations -Easily create areas and other geometrical properties of figures -Generate infinite polygons -Measure the area, perimeter, centroid, height, and other properties of figures -Label and attach labels to your figures -Grab your figures onto your TI-Nspire, TC-Nspire or other TI graphing calculator -Export your figures into Word and PowerPoint documents

-Batch recording mode supports recording a session -Comes with a fully customizable appearance -Change the font style and colors -Help file includes detailed help instructions All the features and functions described in the e-book are also available in the program. The notes we added are available in the help file as well. -Changing the color: "When you change the color of a figure (lines, arcs, circles, etc.), all the figures are automatically changed. It's no trouble to change just 1 figure."

-Rotation: "To make the figure rotate, select the figure, and then click the arrow button on the bottom right corner of the figure." -Vertical and Horizontal lines: "To draw vertical or horizontal lines, select the line and click the Intersection button." -Labels: "You can define the figure by attaching and labeling different labels. If you want to create a nice figure by using this feature, all you need to do is to define a figure,

After the golden age of digital design, when the power and popularity of computers exceeded that of high-end desktop publishing machines and printers, the printer market gradually went through a period of decline and economic crisis. Printing is no longer an available solution for many businesses, but the need for on-demand printing still exists. This is where specialized newspaper printing presses come into play. Unfortunately, there are no reliable

and cost-effective solutions for them on the market. That's why some businesses are hiring professional designers, to create their newspapers and leaflets. Cabri II eases the design of personalized newspaper layouts and leaflets. It is a professional graphic design solution that comes in handy for both designers and clients. Cabri II is a rich graphic design solution that allows you to choose from a wide variety of templates and pre-designed layouts. You can quickly modify the

templates' features and personalize them to your liking. The application also allows you to apply gradient styles, create beautiful frames and add different graphics, logos, and images in order to enhance the design. Cabri II has a powerful and easy-to-use interface, allowing you to create creative designs in a matter of minutes. It allows you to assign different colors and fonts to different sections of a layout, along with the ability to change the size and shape of images in order to

improve the overall quality of the layout. In addition to this, the application comes with several professionally-designed templates that you can adjust or create your own. When you are done with the design, you can print it directly from the application. The customizable paper options include A4 or A3 and there are also other paper choices such as Glossy, Transparent and Translucent, depending on your needs. In a nutshell, Cabri II is a powerful graphic design and layout software

solution that comes in handy for both designers and clients. Cabri II Plus is a dynamic geometry software solution that comes in handy for both math teachers and students. Providing you with a virtual learning environment, this interactive tool can assist you in learning high-level math concepts. The learning curve is smooth and students can also use the built-in assistant to learn how things work. You can use Cabri II Plus to draw and manipulate all sorts of geometrical figures, from simple

lines, circles or triangles to complex 3D shapes. Create intersection points, add lines, segments, vectors or b7e8fdf5c8

Cabri II Plus is a dynamic geometry software solution that comes in handy for both math teachers and students. Providing you with a virtual learning environment, this interactive tool can assist you in learning high-level math concepts. School Tool is the number one choice for parents that want to manage their children's school on the internet. School Tool can be used to login to the school website, register for a computer class or

even register for school. School Tool comes with a subscription plan that allows you to manage over 50 schools in your account. It's completely FREE! Free educational games provide your child with stimulating and fun time! Download them in your PDA and share them with your family. All the games in our selection are suitable for your child. You will not need to waste your time hunting for the right games. All you need to do is to browse our selection of games and choose the best one for

your child. Games for your child are not only educational, but also entertaining - your child will love playing, and will learn a lot! Cadabra is one of the best text editor with syntax highlighting and file preview. It is very useful for drafting and version control software. All settings are saved and resumed when you restart the program. The program has a built-in code browser that lets you search and navigate source code easily. The program can be used with both the Unicode and ANSI

character sets, as well as for Unicode files. Work faster with the simple and easy-to-use menu featuring common tasks and functions. Instantly create tasks, import and export tasks, rename tasks, send tasks to other people, create and send all kinds of templates and much more. This is a free version of My Virtual Hard Drive. All the features and tools from the full version remain available, however if you don't need some of the additional features, you can upgrade to the

full version for just $9.95. My Virtual Hard Drive Features: File Manager View and explore your entire file system and access the folders & sub-folders inside. You can even create custom folders and make sub-folders inside them (does not apply to Windows XP). View File Size View file size/owner/access in real time. Upload Files Upload files directly from your computer. Simple Media Browser Browse all your music, videos, and pictures. Multi-Language support Support for

multiple languages.

Create, visualize and manipulate geometry and mathematics in a learning environment where you can interact with your creations. Use tools and creative input to draw and manipulate geometric objects, search for objects in a list, mark the location of objects, add labels, measure angles, sketch functions and more. Generate a location list with a click of a

mouse, using instant plotting feature. Use intuitive visual tools to generate and edit lines and polygons, measure distances, angles and all kinds of areas. Manipulate objects and search for objects with the multi-touch tool. Use the strong suite of equations and geometric identities, relate objects, extract interesting properties, plot graphs with built-in equations or use a third-party library (Excel, PowerPoint, Mathematica) and export to a file format of your choice. Key

features: • Draw lines, circles, triangles, quadrilaterals, rectangles, tetragons or polygons. • Transform objects like reflections, translations, and rotations. • Use the ruler to measure objects and distances, as well as to convert angles to radians and degrees. • Use the compass to draw perpendicular or parallel lines, triangles and arcs. • Create intersection points, add lines, segments, vectors or polygons. • Manipulate objects. • Erase objects. • Undo, redo, cut, copy,

paste. • Add labels. • Measure angles and distances using the virtual compass. • Toggle graphics symbols. • Find symmetry, reflection or translation. • Solve equations. • Reuse objects, groups of objects and chapters. • Highlighting and annotations. • Print, export and export to Word and PowerPoint. • Attach pictures to drawings. • Export and import sessions. • Supports almost any kind of geometry. • Use units of measure. • Unlimited undo, redo, cut, copy, paste. • Choose different

object colors. • Press space toggles rotation. • Switch between orthographic and perspective view. • Planar coordinates view. • Multiple and custom palettes for objects, lines, markers, text, and more. • Interactive palette in 3D. • Interactive palette in 2D. • Touch device support. • Use of mouse. • Create, visualize and manipulate geometry and mathematics in a learning environment where you can interact with your creations. Use tools and creative input to draw and manipulate geometric

objects, search for
