The \$300 million renovation of NHL arenas hits another blemish, former players harmed by concussions come forward SPRINGFIELD, IL - In the battle for fans, sports leagues are always wanting to come up with new spectacles to draw a crowd. However, the National Hockey League seems to forget one thing: the team never wins a battle if the spectators sit on the sideline. It seems the NHL always looks to find new and inventive ways to attract fans, but every so often the league ends up making a bad decision that causes a significant problem for the teams and the players. In Chicago, for instance, there is no better example of the NHL making a terrible decision than the Edward M. Burke construction project. For six years, from 1992 to 1998, the John Hancock Center at 600 West Randolph Street was the home to two NHL teams. During this time, the arena became a symbol of greed and corruption as owner Edward M. Burke manipulated the not-for-profit Hinsdale Hospital to gain a sweetheart deal for his private club. As his reputation as Chicago's major league sports corruption went up in flames, Burke's reign of terror was a nightmare for the city's taxpayers. Yet during this time Burke got the NHL to build the Edward M. Burke construction project in Springfield, Illinois, just across the river in the south suburbs. Related Article: Confidential Star Springfield Baseball Yankees – Skeleton of a Tribute to The Suicide Sure, the Springfield project was to be \$150 million to the project. Instead, the NHL gave the dirty work to Wintrust Arena, which plans on leasing the building to the project and into a revenue-sharing "affiliate" arena for the Falcons, which means the team will receive \$5.9 million in rent during the seven years the viciding is owned by the city of Springfield. While \$12.5 million sould like a lot

Lutron Homeworks Illumination 1.62 HOV full versionThe present invention relates generally to an arrangement and method for measuring the rate of rotation of an oscillating member, and more particularly for measuring rotational inertia of such oscillating members. Due to the enhanced control of such oscillating members as are now available, it is generally desirable to measure the rate of rotational inertia of such members in order to improve control. One such construction is shown in U.S. Pat. No. 3,592,117. Other arrangements for measuring rotational inertia are also shown in U.S. Pat. Nos. 3,731,723; 3,735,231; 3,932,606; 4,175,462; 4,1005,812; 4,110,634; 4,273,070; 4,295,649; 4,379,874; 4,378,991; 4,412,387; 4,425,687; 4,502,065 and 4,535,880. All of the above patents, and other patents mentioned in the preceding paragraph, are hereby incorporated by reference herein. In general, many known arrangements and methods for measuring the rate of rotation of such oscillating members include an impeller or turbine connected to such member, and a sensor connected to the impeller or turbine for measuring the rotational speed of the impeller or turbine may be in the form of a turbine may be in the form of a turbine may be in the form of a fan, propeller or turbine may be measured by an impeller or turbine may be measured by an impeller or turbine is connected to a vibrating drive which imparts vibration thereto, the
