Q: Why didn't Star-Lord use all of his shields to get the mass of Planet X away? In Guardians of the Galaxy, it seems that Star-Lord carries a lot of extra cargo that he never uses. In the scene where he crashes the ship they had in the movie (I think?) one of the engines is destroyed. It seems like it would be pretty easy to pop out some of the containers of cargo to use as kindling. He destroyed the engines and was still able to fly the ship with the shields up. Even though the engine is inoperable, why didn't he just use the shields to push the ship off the planet and save the other cargo? (Star-Lord states in the movie that the cargo is life-saving.) A: "He destroyed the engines and was still able to fly the ship with the shields up" This is due to the usage of the Quantum Kinetic Drive. A system powered by tetryon fields. "the engine was destroyed and the ship left Earth, but was being held together with a tetryon field" "It was probably safer to keep the cargo with him. The forces would rip him apart if he had attempted to save it. And there was no telling if the ship could have remained attached to the planet, or if the tetryon fields would've held." - Ronan The Quantum Kinetic Drive is also capable of generating an artificial gravity field. "I'm glad you could join us, Morag. I'm so glad, I'm so glad..." -Bender "I thought you said you didn't like pie." -Bender "I said if I did, I'd eat it with sugar." -Bender "Aren't you adorable?" -Cosmos And obviously, we also see that the engines are capable of generating tetryon fields. They can be used to hold the ship together, and sustain the ship as it travels to another planet. "Galactic economy isn't what it used to be. Back in my day, being able to add tetryon fields to your ship was the ultimate sign of status and achievement." - Billy Dee Williams as Lando This system is also incredibly resilient to damage. "That is one amazing ship. It's like a damaged droids chassis welded together by a drunken droid." - Ya

Q: How to select which plugin to use in Eclipse (in Android SDK) I'm using Eclipse 3.7.2. I think I have installed all the tools, SDK and tools required for my project, however, I can't see the Android SDK in the "installed software". How do I add the Android SDK (I'm using ADT 22.6) A: Are you adding the Android SDK through the Android SDK Manager? If so, have you restarted Eclipse? You may need to do that. If you're installing it via the SDK wizard, it should be enough to just restart your machine. Sigma-1 receptor expression in fibroblasts derived from patients with systemic sclerosis. Systemic sclerosis (SSc) is a connective tissue disorder of unknown etiology characterized by progressive fibrosis, particularly of the skin and visceral organs. Activation of both the classical and the non-classical coagulation cascades, as well as several platelet agonists, are increased in SSc patients compared with healthy controls. Interestingly, both collagen I deposition and platelet activation are enhanced in the presence of sigma-1 receptors (Sig-1R). Since a link between Sig-1R and coagulation has not been demonstrated, we investigated Sig-1R expression in human dermal fibroblasts (HDF) obtained from SSc patients. Cultures of HDF from SSc patients and healthy controls were isolated from skin biopsies. Cell viability and Sig-1R expression were determined by MTT and Western blot assays, respectively. Platelet aggregation induced by collagen and arachidonic acid and cellular adhesion were evaluated to determine Sig-1R influence on platelet activation and adhesion, respectively. Lastly, aorta membranes from patients and healthy controls were investigated to determine Sig-1R distribution by Western blot. Both fibroblasts from SSc patients and control cultures were characterized by a similar cell viability and Sig-1R

expression. Platelet aggregation induced by collagen and arachidonic acid was increased in fibroblast from SSc patients compared with controls. However, there was no significant difference in platelet adhesion between both cultures. Sig-1R was detected in all cell membranes from both groups. Sig-1R expression was increased in aorta from SSc patients compared with aorta from healthy controls. Our data demonstrate that the expression of Sig-1
