Comorbidity Comorbidity is the presence of one or more health condition, illness, or syndrome in an individual at the same time or in close succession. If a person has two or more disorders, this is comorbidity, otherwise it is comorbidity only if the person has two or more disorders at the same time. Comorbidity generally refers to an individual's present health condition, and is often the result of something having occurred (e.g. disease) or been changed (e.g. organ transplants). It is not synonymous with comorbidity in psychiatric medicine, which is the concept of two or more diseases occurring at the same time in the same person. Comorbidity is prevalent in many people and although it has been investigated, it continues to pose a challenge in the treatment of one disease when patients have multiple diseases. The most frequent comorbid diseases associated with each other are mental health/suicide and substance abuse, cancer, cardiovascular disease, neurological disease and arthritis. Many studies suggest that 30-75% of patients with HIV develop other chronic medical conditions. Additionally, other organ systems are also
