To save time, buy a book that shows you Photoshop well instead of reading this book on how to use Photoshop. Photoshop CS3 has been upgraded to Photoshop CS4, which you can read about in the upcoming "Fixing and editing: Retouching and compositing" section. ## Taking a Digitally Created Image and Making it Your Own You can create digital images with your computer, manipulate them in Photoshop, then save them with a simple two-step process, as shown in Figure 1-2. FIGURE 1-2: You can start with a photograph and make it shine with Photoshop. First, use a photograph in a graphics program, such as Paint Shop Pro or Photoshop, and export the image in either the TIFF or JPEG format. Second, import the image into Photoshop and edit and improve it. You can save it as another JPEG or TIFF file. Chapter 2 gives you help using these two tools. ## Choosing a Photo Before you start, select a photo in either Paint Shop Pro (PSP) or Photoshop. TIFF, JPEG, and RAW files can all work in Photoshop, but for the purposes of this chapter, we concentrate on JPEG images. The most important thing to keep in mind when selecting a photo is the _focal length_ — the relative distance between the lens and the subject. The shorter the focal length, the more distant the subject appears in the frame, and the longer the focal length, the more the subject appears close to the lens. (We cover more about focal length in Chapter 5.) _Focal length_ is measured in millimeters and, for a lens made by most camera manufacturers, is represented by a two-digit number, such as 50–200mm, but it's just as easily represented by the _f-stop,_ such as f/5, f/8, or f/11. The number tells you how much of the full-frame image area (the big, rectangular part of the frame where you see part of the photo and some of the background) the lens takes up in relation to the total image. A shorter focal length means that you can get a good amount of the subject in the frame and part of the background. A longer focal length lets you see more of the background and less of the subject in the frame. For most 35mm cameras, the focal length of your lens is represented by a three

The graphic design software is used to improve the look and feel of a website, among other things. The designers use graphic design tools to develop and refine graphics. The designers can also make interactive mockups or prototypes to be used in order to get feedback from stakeholders or clients. The graphic design software is also used by photographers to improve their photography or simply to share their art. The software is used in almost every field of graphic design and design, such as photography, architecture, illustration, and web design. Various versions and editions of Photoshop are available, including Adobe Photoshop 5 and 6, Adobe Photoshop Elements, Adobe Photoshop, Adobe Photoshop Standard, Adobe Photoshop Lightroom, Adobe Photoshop Pro, Adobe Photoshop for image editing, Adobe Photoshop Classic, Adobe Photoshop Standard, and Adobe Photoshop Lightroom. Introduction Photoshop is a digital image editing software developed by Adobe Systems. It is used for all graphic design types and all levels. Besides the graphic design industry, Photoshop is a favorite software among photographers and web designers. It is often used to manipulate photos to add objects, make them look better or make them more interesting. This software can be used to develop, design, and improve high-quality photos, including: Photo editing: Unlike most graphic design software that is mainly used for making logos, typefaces, and templates, Photoshop is used for all graphic design types. The software is used for logo designing, graphic design, web design, and photo editing. Even though Photoshop is used for web design, it can be used to design anything from websites to book covers. Photographer and web designer users can use Photoshop to manipulate photos to look better or to add more content to the photos. It also has many useful tools that are very useful in web design, such as the ability to change the color of text and websites. Photoshop's Photo Editing Photo editing in Photoshop is a very important function. Once you have saved your photo into the right format, you can use Photoshop to add more interesting elements. Before you save your image, you need to open the file in Photoshop. After opening the file, you will go to the Choose a New Document menu. Choose New from the menu to open the Photoshop file in a new document. You can work on the image in this open file. You can find your image file on your computer's desktop. LA Galaxy midfielder David Beckham would've been proud of how the team showed up at UCLA to take on UC Santa Barbara on Friday night. As for the soccer players, they just wanted to get some points. In what was billed as a showcase for the league, the Galaxy entered the game against the Gauchos as the most publicized squad in the contest. There were no gimmicks, no big-named guest announcers, no "celebrity" crowds, and the soccer media didn't care. "It is fantastic to be here. I love coming to this town," said referee Drew Fisher after the game, in which the Galaxy beat Santa Barbara, 2-1. "This is a great turnout. The crowd and the coaching staff were great. It was a terrific atmosphere, and that's the way it should be. We're here to play soccer." That's a major step forward for the first-year MLS team, which hasn't necessarily enjoyed the celebrity treatment of other minor league teams. Still, the Galaxy did show up and play. "The crowd was phenomenal," Galaxy President Chris Klein said. "It was a great atmosphere for a club. We certainly had our fans there. We knew when we came in that it would be a fun game for everyone involved." Coach Bob Bradley said the biggest challenge of the weekend was preparing for a true sellout. The stadium attendance was 19,347, which was 13,000 more than the club estimated. "We're used to bigger crowds, and the guys had to adjust to it tonight," Bradley said. "It was a good test for us, and we showed up with a big answer." The last time a UCLA representative was to play the Gauchos was Sept. 10, 1997. The Gauchos won 2-0. "I don't think our guys were prepared for the atmosphere," Bradley said. "I thought the level of the atmosphere was very high and the Galaxy are excellent at controlling that." Bradley described the atmosphere as akin to a college game, even though the crowd was filled mostly with university students. "It was a good atmosphere for soccer," he said. "It can be a little harder on the
