Photo Makeup Editor Product Key Screenshots: Photo Makeup Editor Windows 10 Review Introduction Photo Makeup Editor is an easy to use photo makeup application that provides several face enhancement tools through a straightforward interface. While most of you expect a crowded interface with tons of features, Photo Makeup Editor is pretty different and tries to offer a more intuitive approach that's better addressed to beginners. The purpose of the program is quite simple: open any photo and use the available makeup tools to make you look better. There are several utilities at your disposal, including a lipstick, rouge, eye shadow and powder, but also line eyelids and eye color adjuster. Plus, you can reduce and remove wrinkles and even add suntan or lighten up the skin. Of course, you can also change the color or the hair and control a number of settings, such as brightness, contrast and color. All features are easily accessible via the main window and although it's pretty easy to use them all, we've found one thing that may bother some of the users. For example, while the size of the brush can be easily adjusted from the main window, you can change the default settings with the help of keyboard shortcuts, as it's the case of many photo editing tools on the market. Plus, there is no configuration tool, so you're not able to set hotkeys or change any other setting of the application, so you are stuck with the default configuration. The results of a comprehensive makeup process could be amazing, if you're ready to spend some time playing with all the available features. Photo Makeup Editor is indeed a powerful piece of software, you just need to be patient and use

the makeup tools in the right way. As a conclusion, Photo Makeup Editor might come in handy to many users out there, especially thanks to the fact that it boasts such a straightforward look.
