3D models When AutoCAD is used in conjunction with other 3D packages such as AutoCAD LT, Revit, CorelDRAW and SketchUp, 3D models and drawings can be created or enhanced. 3D models can be exported and imported as DXF, DWG, or 3DS, all of which can be imported back into AutoCAD. 3DS (3D Shape) format is natively supported. Some of the features supported by AutoCAD:

- Import and export 3DS, DWG, DXF, OBJ, OFF, POV, STL and VRML formats
- Generate 3D views and solids, assemblies, sections, and bills
- Import and export via OBJ and OFF interchange format
- Ability to display real-time information on 3D surfaces and solids
- Ability to slice and export meshes
- Ability to edit and view 3D surfaces, solids, lights and collections

The incorporation of base salts (e.g., NaCl) into the polymer matrix effectively prevented pore collapse in the polymer substrate. The average pore size and morphology remained nearly unchanged, and the mass loading of immobilized proteins and enzyme catalytic activity were high in the best case ([@B18]). Rice starch grafted with chitosan was used as a support for protein immobilization ([@B19]). Chitosan is a naturally occurring polymer. It is a linear copolymer of glucosamine and N-acetylglucosamine and possesses remarkable solubility in an alkaline environment (pH > 6.0). A good biocompatible matrix was produced by cross-linking chitosan with glutaraldehyde. The grafted chitosan has been used in food and biomedical applications. It was found that the

support can significantly improve the thermal stability of the immobilized enzyme ([@B19]). An anionic polystyrene-supported material (PS-DVB) was synthesized to immobilize the *Candida rugosa* lipase ([@B20]). The immobilized enzyme ca3bfb1094
