Colonoscopy with POEM: comparison of outcomes and adverse events with PSG stenting for patients with refractory constipation. The use of stent is an option for patients with refractory constipation. Its safety and efficacy are not well studied. This study evaluated outcomes and adverse events of the novel procedure, peroral endoscopic myotomy (POEM) using the removable stent (PSG), and compared the results with the outcomes and adverse events of standard POEM. One hundred three patients with refractory constipation underwent POEM (n = 62) or standard POEM (n = 41). Data were compared retrospectively between the two procedures. Multiple case series. Patients' demographics and clinical data were similar between groups. The mean procedure time was comparable between groups (POEM, 42.9 ± 8.0 minutes; standard POEM, 44.8 ± 8.2 minutes; P = .47). The mean follow-up duration was 16.3 ± 9.2 months in POEM and 15.4 ± 10.3 months in standard POEM (P = .70). During follow-up, the bowel movements per week were 3.1 ± 1.2 in POEM and 1.1 ± 0.5 in standard POEM (P < .001).
Q: Unpacking an associative array to a structure I have received an associative array from our app which I have unserialize as so: \$config = unserialize(base64_decode(\$app_config)); I then need to convert it into a structure, but I'm struggling to see how this would be done. I have attempted the following: \$config = unserialize(base64_decode(\$app_config)); // recursively 6d1f23a050
