Bhabhi Episode 21 from Savita.. Bhabhi-...The present invention relates to a fabrication process for a semiconductor device, and, more particularly, to a fabrication process for a semiconductor device that is useful for fabricating a semiconductor device that controls a liquid crystal display, a semiconductor device that is used as a driving element or other component for a liquid crystal display device, a switching element, a thin-film semiconductor device, or a like. At present, a large-sized liquid crystal display device is used in a variety of electronic products, and thus, along with the enlargement of the liquid crystal display device, the complexity of the circuit has increased. Accordingly, for the purpose of improving the reliability and the yield of products, the fabrication cost and the wafer size are reduced, and the length of a wafer production line are also increased, and thus, it has become an essential condition that the fabrication process be improved in order to improve the yield and the reliability of the liquid crystal display device. For the purpose of reducing the fabrication cost for the liquid crystal display device, a large area of the first substrate forming a part of the liquid crystal display device is fabricated at the same time, and the number of total fabrication
