I really don't understand why in iOS 8 we cannot localize strings like this in iOS? The attribute Localizable is not working as expected. A: You can set the key in the.strings file like NSString \*currentUserPassword = @"Password"; NSString \*userPassword = NSLocalizedString(currentUserPassword, @""); or if you're using the new xLIFF format, you can set the key using 1.0 then in your plist you would use AppVersionNumber 1.0 The long-term goal of this research project is to understand the molecular mechanisms of intracellular signaling that lead to activation of the mitogen-activated protein kinase (MAPK) cascade during cell growth and migration. In particular, we are interested in the role of small GTP-binding proteins of the rab family in this signaling cascade. Rab proteins are active GTPases that shuttle between the plasma membrane and the endosomal compartments where they have specific roles in endocytosis and cell growth. We have isolated the rab4c gene encoding a novel member of the rab family. We found that rab4c is required for serum-induced cell migration and cell invasion in vitro and for tumor cell growth and metastasis in vivo. In addition, rab4c modulates cell growth through activation of Ras/Raf pathway. We hypothesize that rab4c plays an important role in signal transduction through the MAPK cascade in serum-induced cell migration and tumor growth. To achieve this goal, we propose to first study the intracellular localization, GTP-bound state and signaling pathways of rab4c 6d1f23a050
