female side of all things... One of the most shocking and exciting
revelations from the X-Men film series is that the ‘invisibility’ of
mutants, is not because they have superpowers, but is simply an
integral part of their DNA. The thing is, it’s actually pretty easy to
tell if someone is a mutant. Because even with a mutation they
will still possess the usual sensory abilities. So, without even
looking, your team mates can usually tell whether you have a
mutant power or not. It’s incredibly strange for the X-Men to
require this sort of genetic mutation. Imagine how the next
generation of mutants, the children, wouldn’t get a normal
lifespan. This has clearly been part of the idea for some time. The
X-Men series is based on the comic books and is a reality show on
the small screen. The show has the same ‘X-Men’ name as the
comics, but the universe is presented differently. There are
various reasons why this mutation would have occurred and is
maintained by mutation. One of these is that in the old comic
books, there was actually some truth behind the ‘mutations’ and
it wasn’t just the result of space travel. The mutation was most
likely the result of radiation from space crashing into an Earth
colony. In the comic books, it is also assumed that the genetic
defect is passed on to the child when that child’s egg and sperm
are mixed. This is called ‘x’ factor DNA and explains why many
people from the same families have a mutation. In the movie
series, it c6a93da74d
