a bypass to it.. 2012 Critical Care Now that
Mandriva is a commercial and.. 2012 Xforce
Keygen. Autodesk. ca. nerdr ftp://ftp.. 2012
Product Key. Xforce Keygen.Q: Programmatically
fetch all "Top" entries from a blog using.net's
EPiServer CMS I'm currently working on a web
application that serves as a store-front for an
EPiServer CMS-based website. The store-front
will display all News items of a specific website.
Since there is only one "Top"-entry for each
category in my case, I just want to display only
this "Top" item and no more... Although I don't

know why I want this, I can't really imagine that this is not normally the case... Anyway, since EPiServer is not all that easy to work with, I searched for some hints to how to accomplish this, and found the MediaWizard, which is able to fetch all the media files from my website. So, I started to try it out and found a very nice attribute which I can use for my purposes: public string UseThisForUrls { get; set; } According to the sourcecode of the MediaWizard, this attribute can be used for specifying a "Top"-entry, an "All"-entry, or even custom URLs (haven't tried it for that, yet). I found the following sample code in the.cs-File, that shows a similar concept, except that the "All"-entry is used:

```
MediaWizard instance = MediaWizardManager.GetCmsEnvironment().GetMediaWizard();
instance.UseThisForUrls = "All";
Media newMedia = instance.MediaFromString(cm.GetItemPath("MediaPage.aspx?itemId=73"));
newMedia.MediaType = "News";
newMedia.ModifiedBy = Properties.Settings.Default.UserName;
newMedia.ModifiedDate = DateTime.UtcNow;
newMedia.PublishedDate = DateTime.UtcNow;
newMedia.PublishedBy = Properties.Settings.Default.UserName;
newMedia.PublishedDate = DateTime.UtcNow;
newMedia.PublishedBy = Properties.Settings.Default.UserName;
