# Truma Trumatic S 5002 Installation Instructions Manual Truma UPD

[Download](#)

Need a manual for your Truma Trumatic S 3002 / S 5002 furnace where can i find the thermocouple on the trumatic s3002p trumatic gas heater the bulb of the thermocouple should sit close to the pilot light in the burner. Basically, the Truma Combi is the best bargain in a Truma. It isnt quiet, its not going to be affordable with all the extras, but it is a reliable, efficient, and cost-effective propane heater and water heater. With only a small investment, you can save hundreds of dollars over a propane heater and gas water heater system, which are typically for around

---

\$1200 per unit. With this setup, you will be able to stay warm in and around your vehicle while the unit is operating. This setup can easily run you around \$800 in your own home, where you will use it an average of three or four hours a day. Its not like other propane water heaters, which usually run in the \$500-\$600 range per unit. The icing on the cake is the Truma Combi, which only costs around \$2,000 in comparison. The unit comes with several accessories, all are capable of being added on top of the unit, and your initial investment will be covered by the manufacturers 10 year warranty. The installation of the trimac s 5002 is as simple as you can imagine. The unit comes as a kit with everything you need to get it installed. It comes with all of the accessories that youll need, the included instructions, the accessories, and the actual trimac s 5002. The only extra piece of equipment youll need to buy is a propane tank (we recommend the atlas 5000), which you can get in a variety of sizes. These tanks are readily available at a variety of outlets, which makes selecting the right size easy for you. The trimac s 5002 is capable of storing up to 5000 gallons of

---

propane, which will last an estimated 6 years. Before you decide to install the trimac s 5002, however, you'll want to decide how you plan to control it. The trimac comes with two main methods of control, which are the trimac plus plus and trimac cp. Each control method has its advantages and disadvantages. As stated earlier, the trimac plus plus is a digital control panel, which is very easy to use once you get the hang of it, but the trimac cp does not require you to purchase any additional equipment to be able to control the trimac.

## Truma Trumatic S 5002 Installation Instructions Manual Truma

Another key feature of the Truma Combi is the Truma Trumatic exhaust venting system. This system utilizes the furnace to provide the exhaust. This means that the water heater is essentially off when the furnace is on. The Truma Combi's exhaust fan is on all the time, venting hot air directly outside. In fact, the ducting runs the length of the unit, so you'd never need to worry about an icy exhaust vent. (A word of caution, do not vent the system directly inside your RV. If it gets cold, you'll need to vent out the window. If your RV isn't insulated well, venting directly inside may eventually cause your interior insulation to rot away.) The Truma Combi uses a patented automatic flame booster system to increase the output of the furnace. This means that when the furnace is off, you won't need to pay high gas fees for the appliance. The system automatically kicks in when the heat exchanger and water tank are both hot, allowing the burner to begin outputting heat at an elevated rate. The rate at which heat is output by the system is increased in a cycle up

---

to the maximum temperature setting of the appliance. The exact routine can be controlled by turning a switch on the wall. The colder you are, the hotter a heater must be to get you hot. The Truma Combis heat output range is from 1500 to 2400 ( and should be set to at least 1900 ) to keep your camper comfortable. You can give it more by bumping the fan speed up to a higher RPM of 1350 ( and be sure the fan is on the burner/heater case). You can also adjust the temperature to -30 C to +10 C, but then the unit wont work as a heater if you set the cooler temperature to -20 C as its too cold to operate the furnace. You can also make it hot as a heater when its not working, by simply setting it to its most powerful setting, 2400 W and running the fan at it full speed. The unit is set at a constant temperature, not the setting that is manually adjustable. We have it set at 1900, which is a fairly high setting, but its been fine, maybe a bit high for some, but then the Truma Combi isnt for everyone. It might even be too high in your camper. This unit gets hot, but its not too hot to touch. If the fan is off, it will be a warm oven-like setting, and nothing wrong with that. Its a good
