i'm not sure whether it's because i'm on a mac or because i'm a nerd, but i love doing this kind of stuff and just playing around with images. for those of you who might not know about photoshop, it's the standard image editing program, used by basically everyone. it's the standard, and the only one you need if you want to make a living at it. for those of you who aren't familiar with photoshop, let me tell you a little about it. you start by opening an image. this could be any kind of image, like a photo or a scanned document. you can also use an image from your hard drive. you can use this to make things like collages or photo album covers. you can also make things like posters or designs. you can even make things like logos and banners. there's a lot you can do with it. next, you'll want to open the image in photoshop. this will open the image in its own window, and you'll see all the layers on your screen. if you're not familiar with layers, this is basically a way for you to organize your image. you can add images, or any kind of effect, to the different layers. for example, you could have a picture layer, and then on top of that layer you can add a texture, which will look like a photo. then you could add a star layer, which will look like a star in the photo. you can change the color of the star, move it, or anything else you want. then you can add another image. on the top layer, you can add a photo, a solid color, a gradient, or anything else. this is how you can build a collage, or make a poster out of your images. you can also go in and make adjustments to your photos, like levels, curves, and white balance. there are also a lot of other features, like creating text effects, and most importantly, filters. a lot of filters will change the color of your image, make it look old, or make it look like something else. this is why you want to learn about photoshop, because you can make a lot of things that you couldn't do in any other way. 5ec8ef588b
