the world of warcraft is a legendary mmo. imagine the world of warcraft in a massively multiplayer rts. you can be a lone wolf, or you can form an alliance and work together with your team. you can also be a warrior, a wizard, or a leader. there is really nothing in the game that is not in the game. kknd is the latest attempt by westwood and the creative assembly to recreate the classic game that started the golden age of real-time strategy gaming. the graphics are better than ever in kknd, and the variety of units, levels, and options makes this game a lot of fun to play. you'd expect a real-time strategy game to have maps that are composed of a number of different terrains - from deserts to jungles to the icy tundra. you'd expect a game that revolves around large cities to have streets and sewers, you'd expect a game to have one or more factions to have a number of units, you'd expect a game to have fire-spouting dragon mounts, you'd expect a game to have a large number of units with different abilities, you'd expect a game to have a built-in editor, you'd expect a game to have.. hey, there's only one thing you'd expect, and that's that kknd is just not that kind of game. it has a map, yes, but not a huge one. the number of units is 12, and you have to unlock each one, which is annoying, but the game will let you choose in game the number of units you want to have. the units are infantry, tanks, battleships, and so on - you have the choice of 12 of them. the attacks they can use against the other players are limited and you can't set up a massive attack chain. there are five factions, but they all have the same units. if you are playing in the single-player mode, you can only use 12 of your units against the remaining 11. kknd is also very limited in its realism. the game lacks any kind of artificial intelligence. if you get an enemy soldier right in front of you, he'll just get up and walk away. 5ec8ef588b
