1.Delete everything from the URL bar2.Hide the URL bar by default3.With one click, click into the URL bar to select the URL you want to link4.Use F4 to enable or disable the URL bar5.Use the mouse button to zoom in and out6.Use the trackpad/mouse to scroll down and up7.Use the arrow keys to move the highlight to the URL you want8.Use the left and right keys to move the highlight to the URL you want9.Use the up and down keys to move the highlight to the URL you want10.Use the home and end keys to move the highlight to the URL you want11.Use the space key to select the URL bar This application is Copyright by www.keymacro.com,2008-2011.All Rights Reserved.Q: About making thousands of parallel CPU threads on mobile GPU We're about to start work on our new, exciting mobile game engine, which we have just committed to a very-humble-budget (less than \$100k) Kickstarter campaign. We're looking at a few options for rendering and physics, and are trying to decide which is best, given our limited hardware budget. In particular, we are considering Paralell, SingleThreaded, and Multithreaded rendering, as well as Boundless Physics. But what about using GPU power for threads? I have heard that this is not a good idea because the GPU is not a good at waiting for the result of many work packages to be finished. But I don't understand why. I know that the CPU is very good at waiting for all of a set of work packages to be finished before starting the next set, because it's a single processor. And I know that the GPU is good at having many work packages running at once (rather than waiting for the results of many work packages), because it's a parallel processor, but I don't understand why. I am not concerned about the GPU being too slow to complete a given work package. I do understand that if I were to make thousands of parallel threads on the GPU, the GPU would be utterly swamped and all of the threads would be waiting for work packages to finish before starting new ones. But I'm interested in why one approach is a bad idea, and the other is a good idea. How would rendering different objects or doing physics on a mobile device differ in their requirements from rendering different objects or doing physics on a 2edc1e01e8

GoSuRF Browser is a feature-rich and user-friendly application designed to offer a fast way of browsing various webpages and provides the option to view sites in multiple tabs. Some of the provided features are bookmark bar, history list, adblocker, online translation, and add-on support. The program provides a well-structured and modern interface with a page viewer and a toolbar with all the necessary elements on the upper part of the panel. Explore links and configure window settings When started, it loads a blank sheet, which can be changed by typing the desired address and can be set it as the homepage. You can browse various websites, copy stored URLs from another source and run them smoothly. Plus, the app enables you to switch between them with ease by using the provided navigational buttons. The "File" menu lets you duplicate a tab, display the recently viewed links, open one from the computer in HTML or HTM file format, as well as save multimedia items. In addition, you can search for particular terms and highlight them in different colors, and zoom in and out to view a specific detail. Last but not least, it grants encoding options and lets you change the text directionality. Add records to bookmark and translate content You have the option to add sites to a favorite folder, from where you can sort, manage and delete them. All URLs can be backed up and restored in a ZIP file. The built-in dictionary comes in handy when you need to translate content from another language, and may be edited and deleted. The Adblocker prevents unwanted ads for being displayed while you surf the Internet, along with banners or Windows pop-ups, and from the menu, you can configure its settings. Furthermore, it's possible to delete the overall browsing history or specific sections, such as temporary files, cookies or addresses. Conclusion To sum it up, GoSuRF Browser is a reliable and fun utility, which provides an efficient and secure method of accessing multiple pages at the same time, insert URLs into a bookmark list, clean the history, and safely protects your sessions.
