HIDE

- If you develop for the Nintendo 64, you've already got the tools you need. With the introduction of new hardware and development environments, your HLA environment may no longer be able to keep up. HIDE was created to remedy this problem. - HIDE uses a non-standard HLA toolset, so you won't be able to use it with other HLA development environments. If you want to use HIDE with another HLA environment, download and install the latest version of HLA from - HIDE is written in C++. While it is a compiled application, it does not register the "HIDE.EXE" program with the system. -HIDE is designed to be system-friendly and requires no global environment variables. - HIDE provides a clean, user-friendly interface. You can start HIDE from the desktop and run it directly. You can also open HIDE's main window from within other applications. - There is a demo version available. This version contains the same tools as the full version. - HIDE can compile, assemble, and run directly from the desktop. It is possible to connect to, and run HLA environments from within HIDE. - HIDE can be set up to work with other HLA environments. Once HLA is installed, a "HIDE.DLL" file is installed that you can use with other HLA development environments. - By default, HIDE uses the graphical environment provided by the HLA development environment. If your HLA environment doesn't provide a graphical environment, you can disable it. - If you wish to use the Java-based development environment, you can download and install the Java Development Kit (JDK). The JDK is a set of programs and libraries used to build programs that run on the Java Virtual Machine (JVM). You will need to provide HIDE with the location of the JDK. HIDE will also need the runtime directory. For example, you might specify that the location of the JDK is "C:\Program Files\Java\JDK\1.2.3". You can specify this location by providing the full pathname. The "java.exe" program (or the equivalent) is usually stored in this directory. The location of the runtime directory can be specified in the "hla.ini" file. - HIDE uses the open source and freeware "CLION" **IDE**
