NM Bookmark Mania

1. A powerful and easy-to-use bookmark manager, with a good and intuitive user interface. 2. A powerful searching method. 3. An advanced browser and bookmarks tree with many functions to display bookmarks. 4. A highly flexible exporting/importing method. 5. Ability to comment in browser bookmarks tree and export/import comments. 6. Ability to store URLs. 7. Ability to sort bookmarks by multiple attributes. 8. Ability to search for bookmarks by using multiple search fields. 9. Ability to quickly export/import bookmarks. 10. Ability to print all bookmarks easily, save them to Word documents, HTML pages or PDF documents. 11. Ability to export and import all the fields about bookmark. 12. Ability to check each bookmarks URL automatically without opening the browser. 13. Ability to check each URL has any comment. 14. Ability to check the URLs has any name of the files. 15. Ability to check the URLs has a customized color. 16. Ability to check each URL has a customized date. 17. Ability to check each URL has a customized date of birth. 18. Ability to search for any field about bookmark easily. 19. Ability to retrieve and to edit any field about bookmark. 20. Ability to check any field about bookmark automatically. 21. Ability to retrieve and to edit multiple fields. 22. Ability to retrieve and to edit comments. 23. Ability to check if the URL is open in multiple browsers. 24. Ability to check if the URL is opened in the most recently opened browser. 25. Ability to check if the URL is open in the most recently opened browser. 26. Ability to check if the URL is opened in the most recently opened browser. 27. Ability to export all the fields of bookmarks to Word documents, HTML pages, and PDF documents. 28. Ability to print and export the fields of bookmarks to Word documents, HTML pages, and PDF documents. 29. Ability to print and export all the comments of bookmarks to Word documents, HTML pages, and PDF documents. 30. Ability to export all URLs to Word documents, HTML pages, and PDF documents. 31. Ability to export all the fields of URLs to Word documents, HTML pages, and PDF documents. 32. Ability to import and export all the fields of bookmarks to HTML pages, PDF documents, and Word documents

1. Field of the Invention The present invention relates generally to the field of synchronizing communication signals and more specifically to the synchronization of a local oscillator.

2. Description of the Related Art Phase-lock loop (PLL) circuitry is used in a number of fields, such as communications, broadcast systems, telecommunications, and consumer electronics. PLL's may be utilized to synchronize a local oscillator signal to a high frequency reference signal. Typically, the local oscillator signal is synchronized to the reference signal so as to cause the local oscillator signal to have a phase and frequency very close to the phase and frequency of the reference signal. The phase and frequency of the reference signal are often known as being "locked" to the local oscillator signal. Conventional PLL circuitry typically utilizes a loop filter or loop filter capacitor CLLF to remove and/or attenuate high frequency noise from the reference signal. While the loop filter serves to eliminate high frequency noise from the reference signal, the loop filter also typically requires a substantial amount of time to adjust the voltage-controlled oscillator (VCO) to reach a locked state. As the loop filter or loop filter capacitor CLLF is adjusted to eliminate high frequency noise, the voltage-controlled oscillator VCO initially responds to the VCO oscillator signal by pulling VCO to a voltage level at which the VCO oscillator signal can pass through the loop filter and reach the reference signal without being too high or too low. As the loop filter capacitor CLLF is reduced, the VCO oscillator signal passes through the loop filter and the loop filter capacitor CLLF to the reference signal, however, this often takes a substantial amount of time. This delay may be exacerbated by other aspects of the PLL circuitry. For example, the PLL may have to be conditioned before reaching a locked state. Other parts of the PLL circuit may further delay the PLL before achieving the locked state. Many of the delay problems may be overcome by using a loop filter capacitor CLLF having a reduced capacitance. However, this may result in high frequency noise being passed
