Solution Manual.Francesco Savonarola  
Francesco Savonarola (fl. 1448-1486) was an Italian mathematician and cleric. His best-known work is a Book of Expositiones, a collection of nine treatises on various mathematical topics, particularly geometry and perspective. He is not to be confused with his namesake, the preacher and reformer Francesco da Volterra, who was born in the same year and died in 1484. Biography Savonarola's background is unknown. His work was written at the behest of his older brother Girolamo Savonarola, who served as Pope Alexander VI from 1492 to 1494. Savonarola had first served in Alexander VI's household as an assistant to his brother Cardinal Rodrigo de Borgia. After Rodrigo's death, Savonarola was appointed Bishop of Verona, but because he had taken the name of the Dominican friar he had become, he was forced to resign. In 1456 he was imprisoned for a year and a half and his bishopric was given to his brother, though they were subsequently reconciled. His elder brother Girolamo was sentenced to death by the Inquisition in Rome, and was eventually executed. His brother had also instigated the sentence of Giovanni de' Medici, the grand duke of Tuscany, and his brother's plot was uncovered in 1498. Cardinal de' Medici, the grand duke's uncle, was elected pope as Clement VII and imprisoned Girolamo, though he later learned that Girolamo had not been involved in the de' Medici plot. Despite the banishment from Rome, he was able to have work published in Ferrara, where he resided. His Book of Expositiones, a f988f36e3a
